

The ✓ signifies, that a case has no data race and would pass a data race check.
The ✗ signifies, that a case has a data race and would not pass a data race check.

1 Categoricalised for Coverd Hazard Type

The (potential) data race occurs ...	MPI		Open-SHMEM		NV-SHMEM		Hybrid	
	✓	✗	✓	✗	✓	✗	✓	✗
... due to a dirty read initialised on the same rank	-	1	-	2	-	3	-	-
... due to a dirty write initialised on the same rank	-	4	-	5	-	6	7	8
... due to a dirty read initialised on different ranks	-	9	-	10	-	11	-	-
... due to a dirty write initialised on different ranks	-	12	-	13	-	14	-	-
... while using lock-unlock style synchronisation	15	16	17	18	19	20	-	-
... while using wait style synchronisation	21	22	23	24	25	26	-	-
... while using collective style synchronisation	27	28	29	30	31	32	-	-
... with the sync being dependant on a handle	33	34	35	36	37	38	-	-
... using P2P communication	39	40	-	-	-	-	-	-
... using collective communication	41	42	-	-	-	-	-	-
... using RMA communication	43	44	45	46	47	48	-	-
... using custom datatypes	49	50	-	-	-	-	-	-
... using operations with atomicity guarantees	51	52	53	54	55	56	-	-
... using inter- & intra-node-parallelism (e.g. OpenMP)	57	58	59	60	61	62	-	-
... in nested function calls	63	64	65	66	67	68	-	-
... in a recursive function call	69	70	-	-	-	-	-	-
... in a function called by a pointer	71	72	73	74	75	76	-	-
... on an aliased memory region.	77	78	79	80	81	82	-	-
... due to the sync not applying to the affected memory	-	-	-	-	83	84	-	-
... with comm relevant handles stored in lists	85	86	-	-	-	-	-	-
... using multiple syncs on different memory regions	87	88	-	-	89	90	-	-
... using (non-)overlapping regions of the same array	91	-	92	-	-	-	-	-
... in a proxy app	93	-	94	-	-	-	-	-
